

FLUROLIN D3

drops 30 MI

Active Ingredients

Vitamin D3 and Fluor

Vitamin D3 corrects a deficient situation of this vitamin and increases intestinal calcium absorption.

Fluor is indicated for the prevention of tooth decay. It can make tooth enamel more resistant to acids produced by dental plaque bacteria in the presence of sugary substances, promote remineralization and influence, by reducing it, the degree of acid production by bacteria. The intake of fluor should begin before the eruption of the teeth and be continued throughout life

Indications

Dietary supplement of Vitamin D3 and Fluor usefull in all cases of reduced dietary intake or increased need

Directions for use

Infants and children : 8 drops from one time to twice per day or depending on the doctor's advice
